

Dear Sir Muir:

I do hope you'll re-consider the participation of Professor Geoffrey Boulton on your Review Panel. His participation threatens to impugn the integrity of your team's findings due to his clear bias articulated on many occasions in favor of anthropogenic climate change and his relationship Department of Environmental Science and to the University of East Anglia. Public satisfaction with the results of your findings demand the very highest level of transparency and impartiality. Geoffrey Boulton does not have that and therefore his presence is unlikely to convince the general public.

Sincerely,
John
